# Instructions for Automatic Tape cutter dispenser

Product Overview

6.5" Length, 5" height, 3.5" Width. Product made in China. Automatic tape cutting dispenser comes with an extra blade. The tape holding area can hold any roll that is less than 1.5" in width. A one handed way for watchmaker's without 2 free hands to easily and instantly cut any length of tape. Useful for cutting polymide tape. Impossible to cut your finger on with safety features of blade. Not for use on duct tape. 1" main core. .80" for other 2 cores. This dispenser can hold and cut up to 3 rolls of tape at the same time depending on tape width. The maximum height for a roll is 3.5".
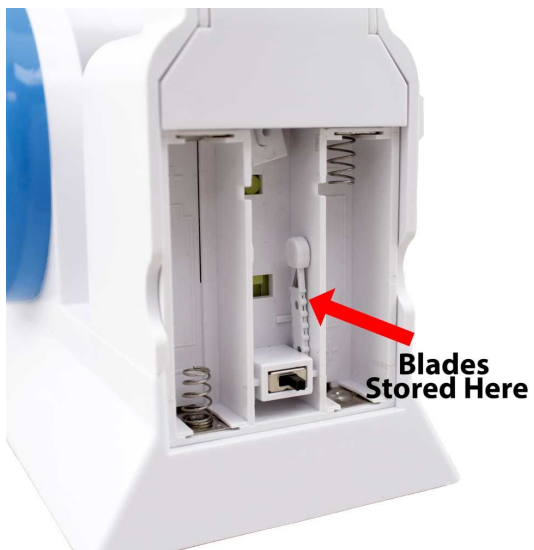

Set up instructions

Pull the plastic tape roll holder straight up so that you can place the roll of tape on and then slide the piece back in.

Remove plastic plate that covers the on/off switch.

Insert 2 AA batteries (Not Included)

Take out 1 of the blades that are within the middle of the battery hub above the on/off switch. Replace plastic battery cover.

Blades Stored Here

Insert the blade with the rounded part up into the plastic sleeve above where you put the batteries in.

Adjust blade height so that the half of the blade is slightly lower than the top.

Turn the machine on and cut tape easily by making sure the tape presses down slightly on the activator past the blade.
